Divij P

Engineer - Cloud and Infra Management | Cadre: P1 | Location: Chennai

Experience Summary

- AWS Cloud Engineer with hands-on experience in cloud operations and operational readiness across enterprise AWS environments. Worked on AWS, Terraform, Python, GitHub Actions, and AWS Lambda-based operational automation, including implementing monitoring and alerting solutions to support day-to-day operations. Involved in validating cloud resources and configurations to ensure operational requirements are met.

Skills Summary

Technical	AWS EC2, RDS, S3, Lambda, CloudWatch, SNS, Terraform, Python, GitHub Actions, CI/CD
Management	Operational Coordination, Task Prioritization
Behavioural	Problem-Solving, Attention to Detail
Domain	AWS Cloud Operations, Operational Readiness, Monitoring and Alerting, Operational Automation
Language	English, Tamil

Professional Certifications / Trainings

1. **AWS Certified Cloud Practitioner**
   Gained foundational knowledge of AWS Cloud concepts, core services, security, pricing, and cloud benefits.
   Issued: October 27, 2025
   Expires: October 27, 2028
   Validation ID: 7e8425e1dee2415faa2e11251f0c232d
   Verification: Verify AWS Certification

Work Experience

Project Name	ABSA – CIS - EB Cloud Operation Support
Start Date	27 Jan 2025
End Date	31 Oct 2026
Project Description	The project provides cloud operations support for ABSA applications migrated to AWS. The focus is operational readiness: confirming each application meets the required operational standards before it is handed over to the application team. Readiness covers Patch management, AMI management, Technical Change and Incident management, CI/CD, Backup and Restore, Logging, Monitoring, Alerting,

	and Service Transition. Applications are taken up in sets. After hypercare ends and the readiness tasks are complete, each application moves to the application team for ongoing management.
Roles and Contribution	Initially supported monitoring before expanding into operational readiness. • **Logging, monitoring and alerting:** Deployed alerts for servers, databases, and ECS using Terraform and CI/CD pipelines with GitHub Actions. • **Patch and AMI management:** Verified SSM agent installation and configuration, AMI dates, private AMI usage, and security agent installation. • **CI/CD:** Verified application team pipelines where used, including security checks such as no hardcoded credentials. This is not required for rehost applications. • **Backup and restore:** Confirmed backup coverage for application servers. Performed DR failover and snapshot-based restore activities to demonstrate recovery to application teams. • **Technical change and incident management:** Coordinated with application teams, who handle these through their own procedures. • **Service transition:** Completed the readiness tasks and supported handover to the application team after hypercare. • **Operational automation:** Wrote Python scripts to extract and validate resource details across accounts. Built Lambda automations for notifications on unused cost-incurring resources and missing mandatory tags, and for automatic CloudWatch alert resolution.

Educational Qualification

Qualification	Institution	Location	Duration
BCA with Data Analytics	Bharath Institute of Higher Education and Research	Chennai	Sep 2021 – Apr 2024
HSC – Computer Science	Sivakasi Hindu Nadar Mat. Hr. Sec. School	Chennai	Jun 2020 – Mar 2021
SSLC – Science Stream	Sivakasi Hindu Nadar Mat. Hr. Sec. School	Chennai	Jun 2018 – Apr 2019
